**67636** – 3.23 grams  
**67637** – 2.34 grams  
Ferroan Anorthosite

Figure 1: Photo of 67635. Scale in mm. S72-49561.

Figure 2a: Photo of 67636. Scale in mm. S72-49551

### Introduction

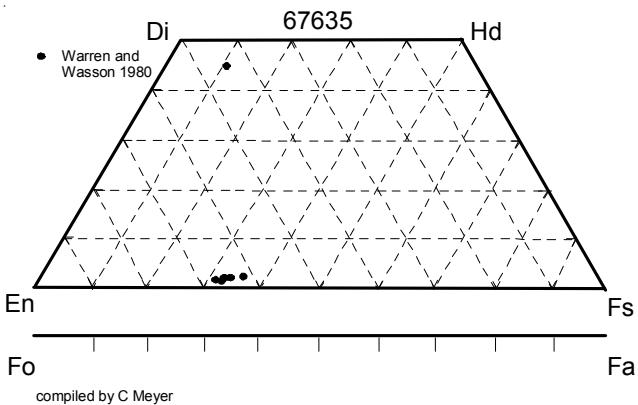

67635 - 67637 were collected as rake samples from the SE rim of North Ray Crater in the vicinity of the White Breccia Boulders (67415 etc)(Sutton et al. 1981). They are relatively unshocked ferroan anorthosite, but have not been dated.

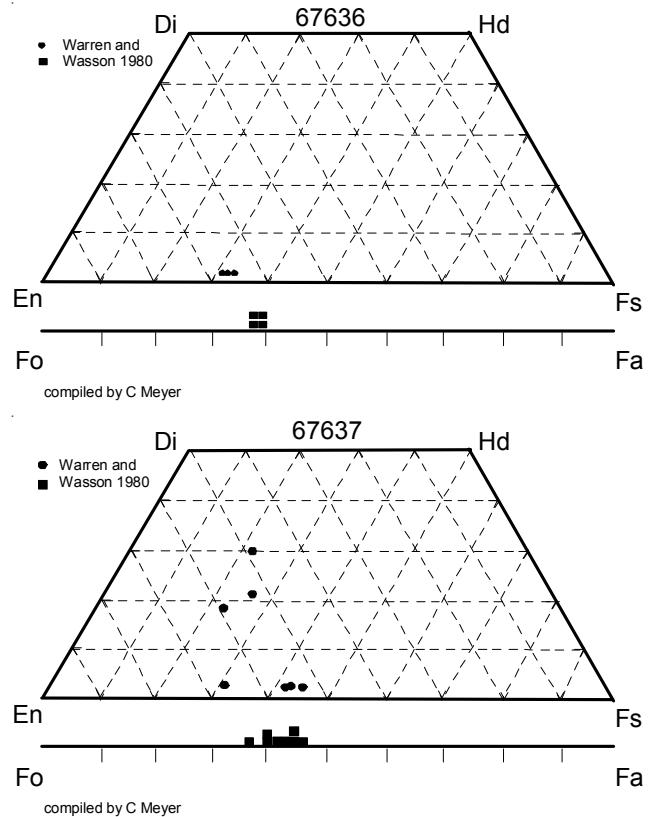

Figure 2b: Photo of 67637. Scale in mm. S72-51053.

### Petrography

67635 is an angular, chalky white, very homogeneous sample with very finely granular sugary texture. It has very tiny opaque flakes disseminated throughout. Part of the surface has micrometeorite craters with brown transparent glass linings. 67636 and 67637 are similar.

Figures 2 a, b c: Pyroxene composition of 67635 (from Warren and Wasson 1980).

Warren and Wasson (1980) reported that 67635 is a “monomict breccia, perhaps lightly less cataclastic than typical ferroan anorthosites”.

### **Mineralogical Mode for 67635**

Olivine + Pyroxene	12.4 %
Plagioclase	87.4
Opacites	0.1

### **Mineralogy**

The composition of pyroxene and olivine has been reported in Bersch et al. (1991) and Warren and Wasson (1980). Trace elements were reported by Smith et al. (1980).

Plagioclase ( $An_{95}$ ) in 67935 is up to 3 mm in size. Trace elements in plagioclase were reported by Steele et al. (1980) and Hanson et al. (1979).

### **Chemistry**

Palme et al. (1984) and Warren and Wasson (1980) have analyzed 67635 (table 1 and figure 6) and the REE pattern is illustrated in Stoffler et al. (1984). The Ir and Au content is low and it is considered a chemically “pristine” sample of the early lunar crust.

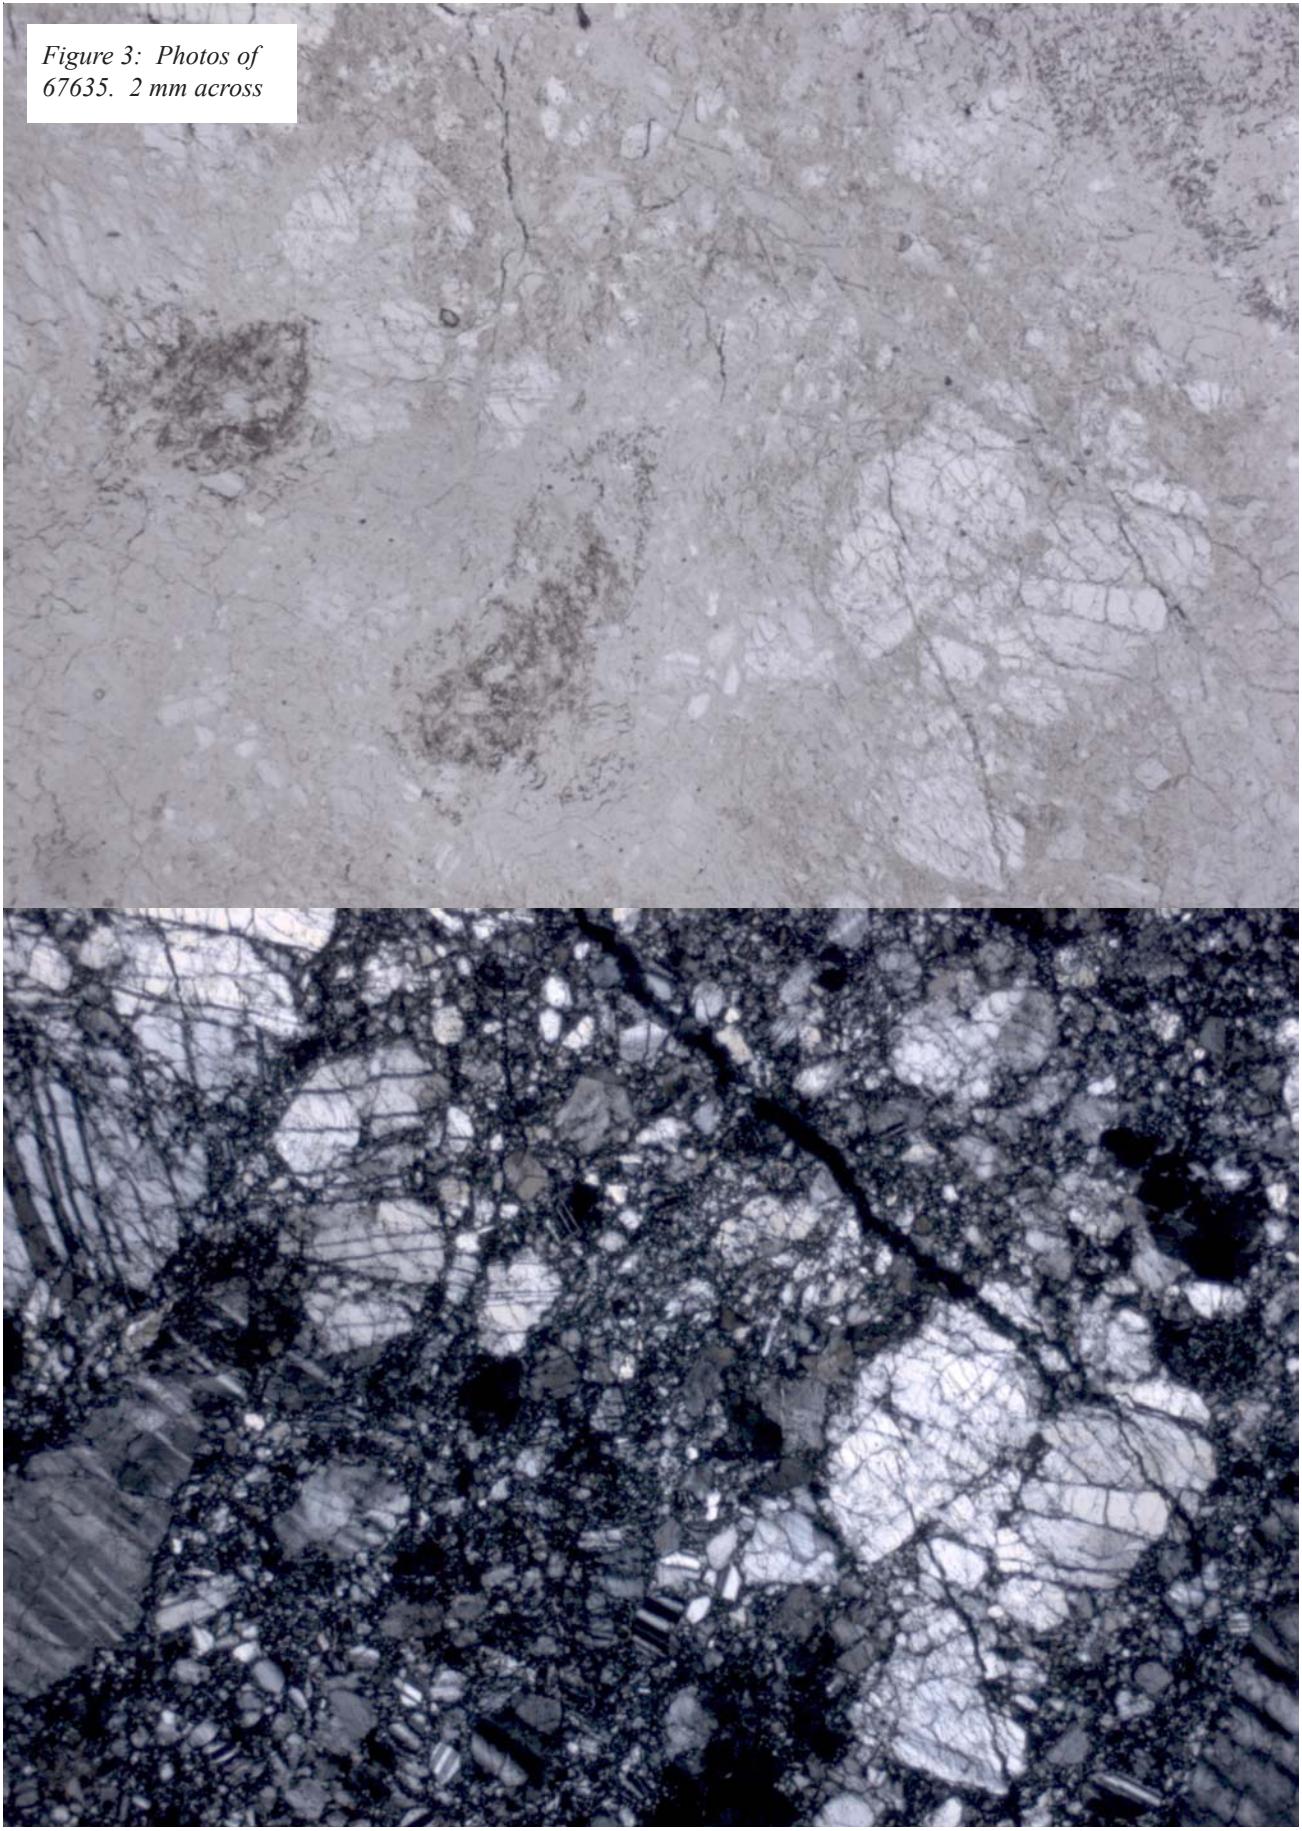

### **Radiogenic age dating**

None reported

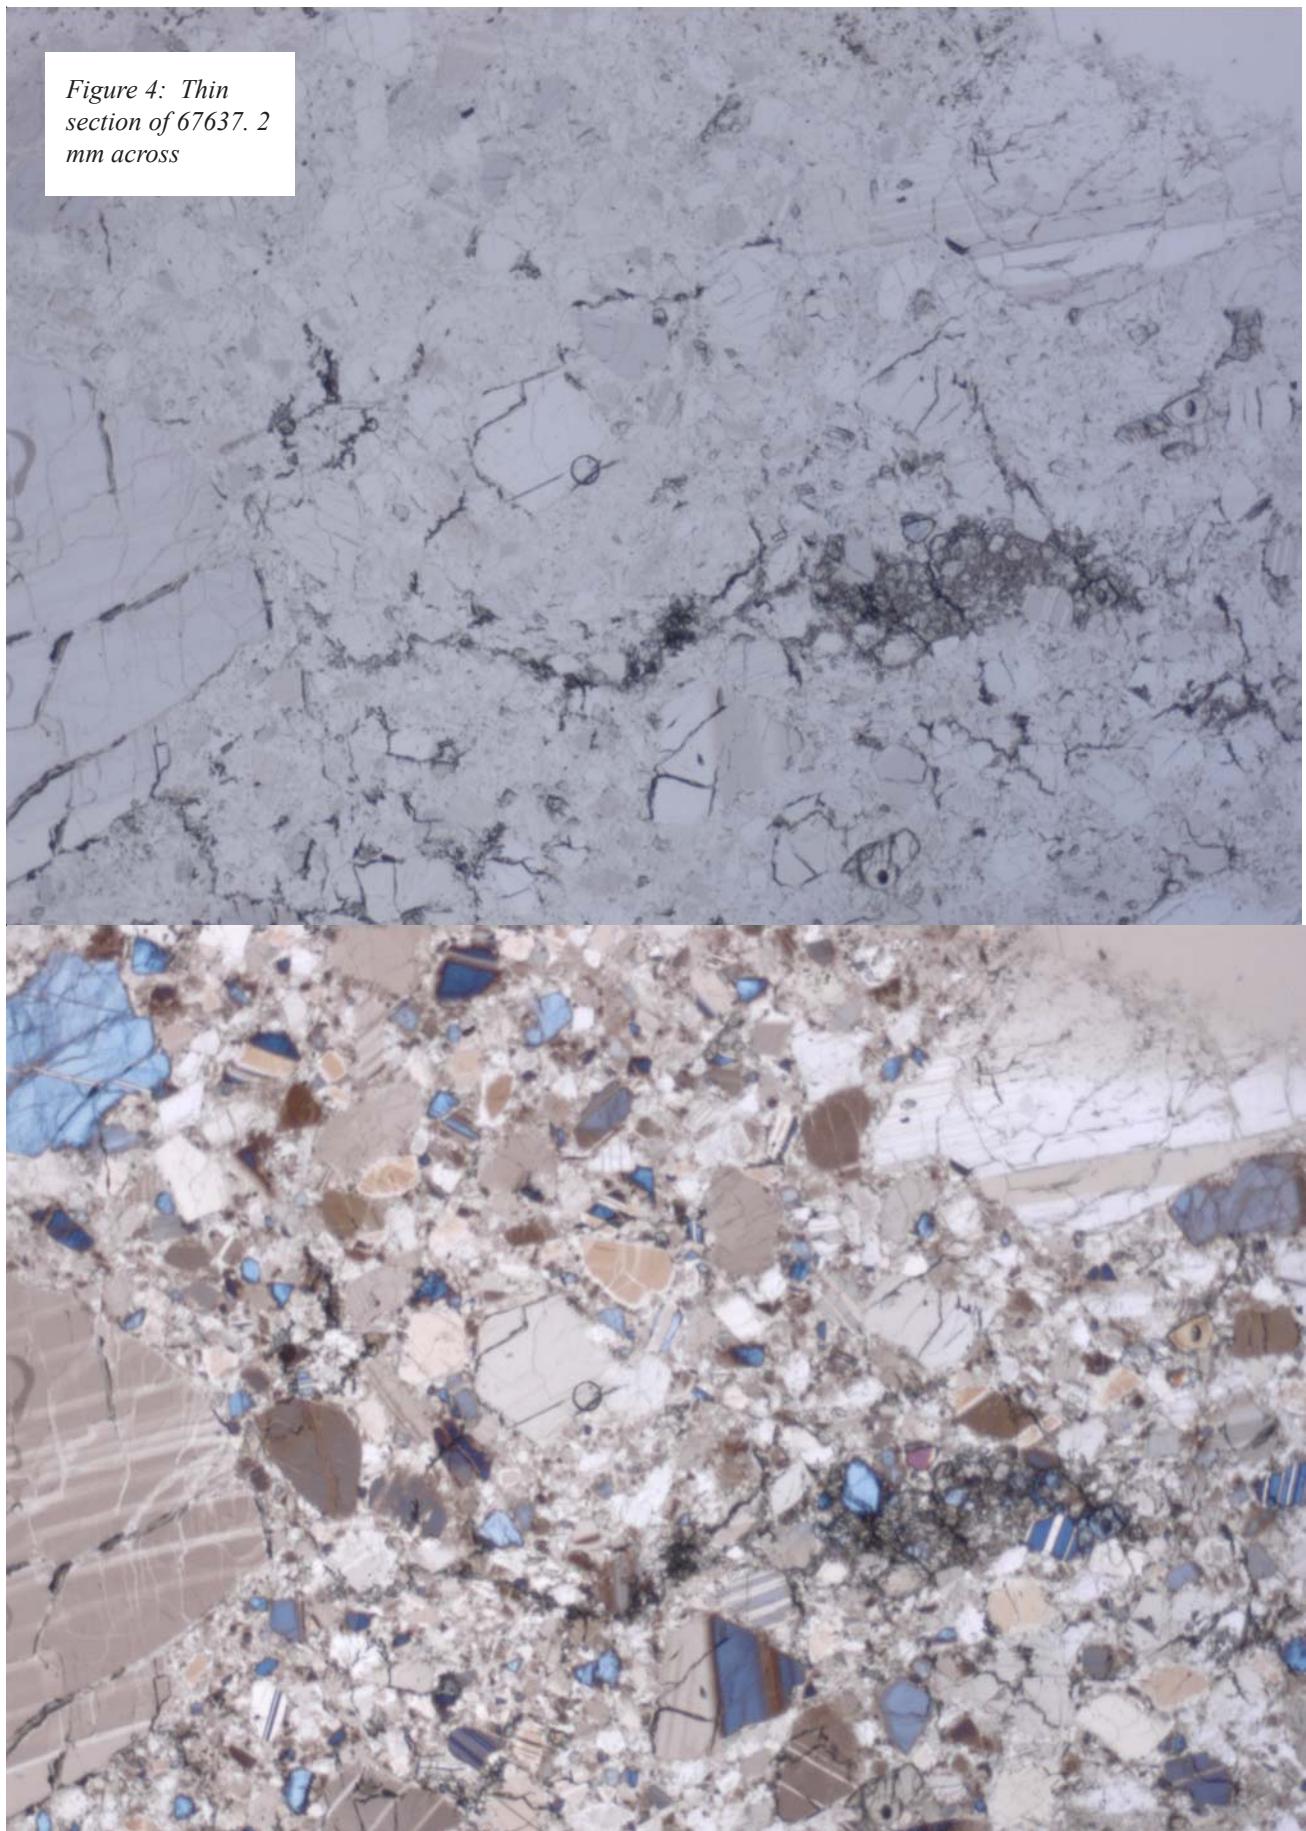

### **Other Studies**

The samples of North Ray Crater were the subject of a consortium led by Dieter Stoffler.

*Figure 3: Photos of  
67635. 2 mm across*

*Figure 4: Thin  
section of 67637. 2  
mm across*

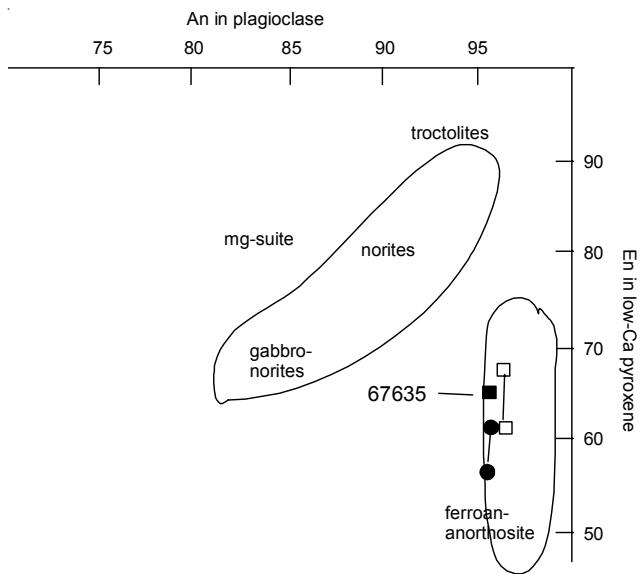

Figure 5: Plagioclase and pyroxene composition of 67635 showing that 67635, 67636 and 67637 are ferroan anorthosites.

### Mineralogical Mode for 67636

Olivine + Pyroxene	3.3 %
Plagioclase	96.4
Opaques	0.2

### Mineralogical Mode for 67637

Olivine + Pyroxene	4.6 %
Plagioclase	95.2
Opaques	0.2

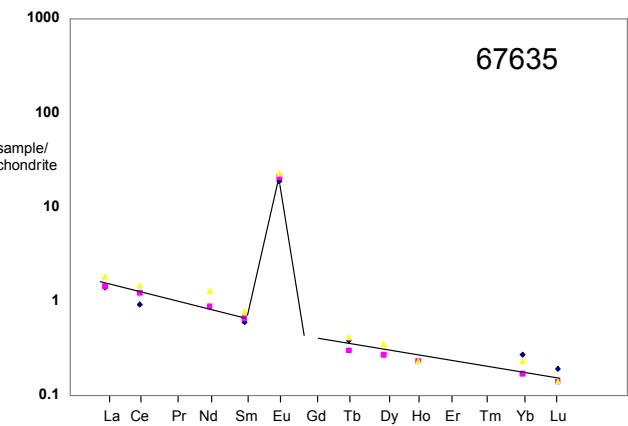

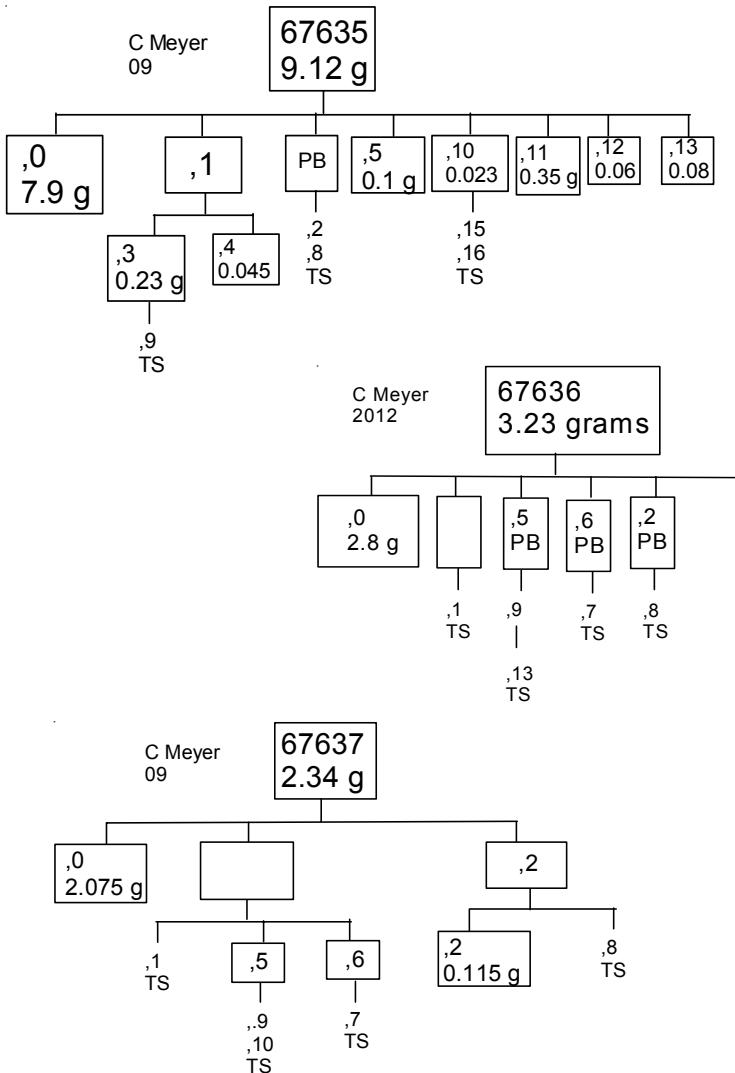

Figure 6: Normalized rare-earth-element diagram for 67635 (data from Warren and Wasson 1980 and Palme et al. 1984).
