Figure 2: Photo of 68846. About 1 cm

Introduction

68845 and its companions were sieved from a large soil collected at station 8, Apollo 16 – see section on 68840. They are coherent, grey, aphanitic rocks. Thin sections are not available at this time.

Chemistry

The composition of these particles is reported as and average (Korotev 1994). They appear to be very feldspathic (table).
