

**71587 – 41.3 grams**  
**71525 – 3.9 grams**  
 Ilmenite Basalt

Figure 1: Photo of 71587. Scale in mm. S73-33431

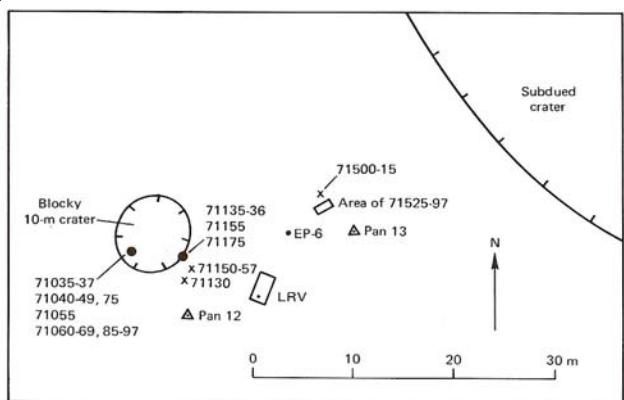

Figure 2: Map of station 1 showing location of rake samples.

### Introduction

71587 is a fine grained, vesicular basalt (figure 1).

71525 - 71596 etc. are rake samples collected as part of a comprehensive sample at station 1, taken near Steno Crater, Apollo 17 (figure 2).

### **Mineralogical Mode**

	<b>71587</b>	<b>71525</b>
Olivine	5.4	6.1
Pyroxene	44.1	43.5
Plagioclase	28.5	27.2
Opaques	18	17.7
Silica	1.7	4.6
Meostasis	1.2	0.8

### Petrography

71587 is an olivine-microporphritic ilmenite basalt similar to 71525 (Warner et al. 1978). It has small olivine and elongate ilmenite phenocrysts set in variolitic to granular groundmass of pyroxene, plagioclase and ilmenite. Armalcolite is mantled by ilmenite. Pyroxene is chemically zoned (figure 3).

### Chemistry

Warner et al. (1975) determined the chemical composition of 71587 and Murali et al. (1977) determined 71525 (figures 4 and 5).

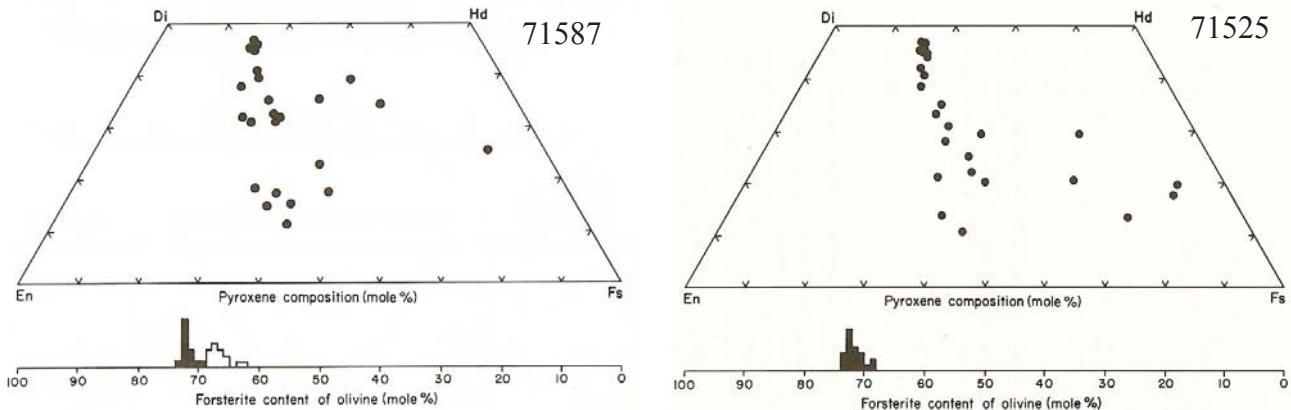

Figure 3: Pyroxene and olivine composition of 71587 and 71525 (Warner et al. 1978).

### Radiogenic age dating

None

### Processing

There is one thin section each.
