

**72738**  
Impact Melt Breccia  
23.8 grams

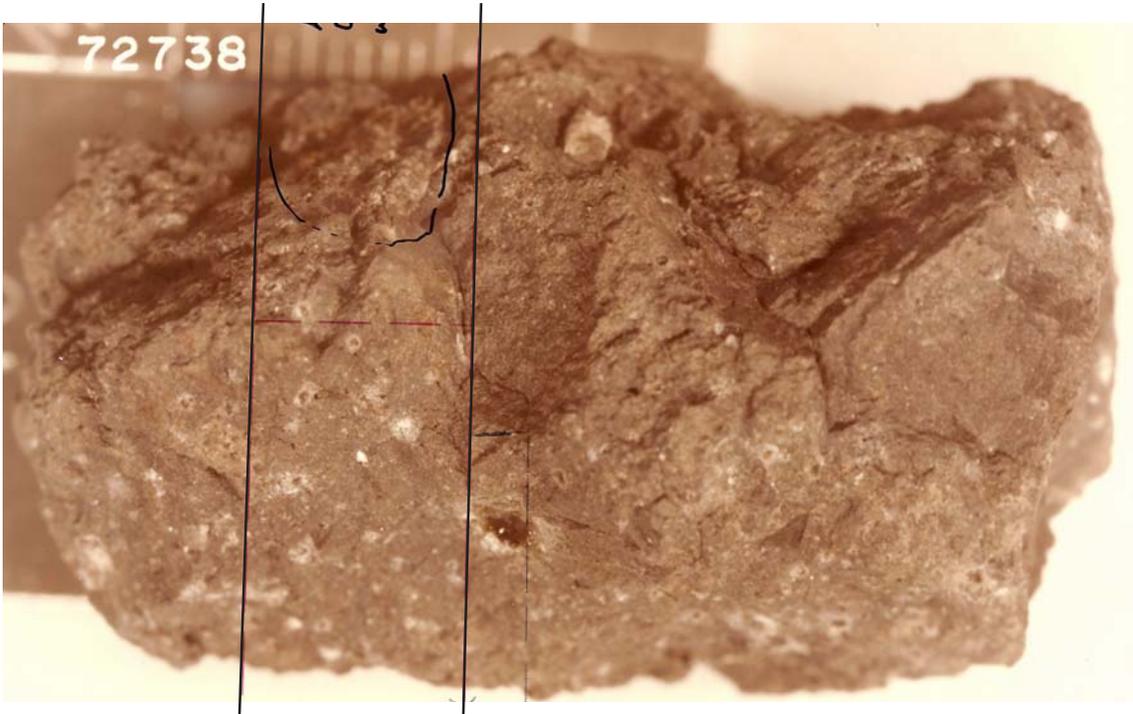

Figure 1: Photo of 72738 showing position of slabs. S73-33454. Slab is 1 cm wide. Note the minislabs isolated the zap pit.

**Introduction**

72738 is an impact melt breccia with a microsubophitic matrix. It has the same chemical composition as other Apollo 17 impact melt breccias.

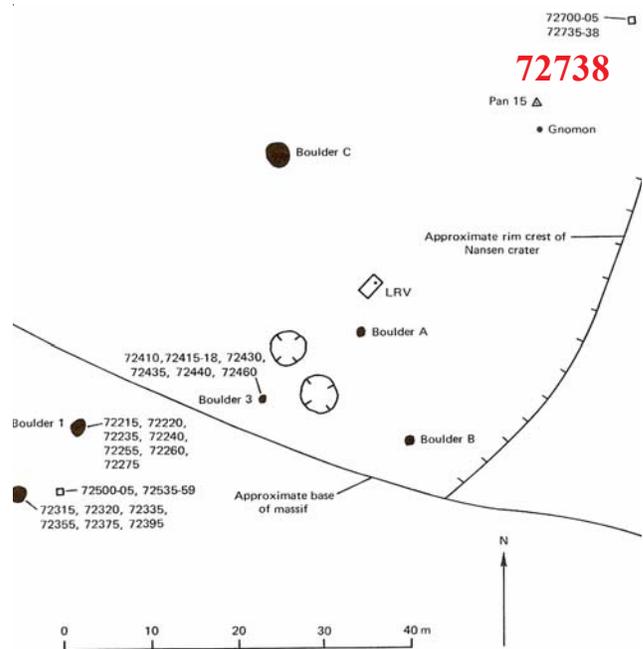

**Petrography**

The matrix of 72738 is microsubophitic, with abundant plagioclase clasts. Pyroxenes and olivines range in composition (figure 3).

Warner et al. (1978) noted a zircon clast in one of the thin sections.

**Chemistry**

Murali et al. (1977) determined the chemical composition.

**Station 2, Apollo 17**

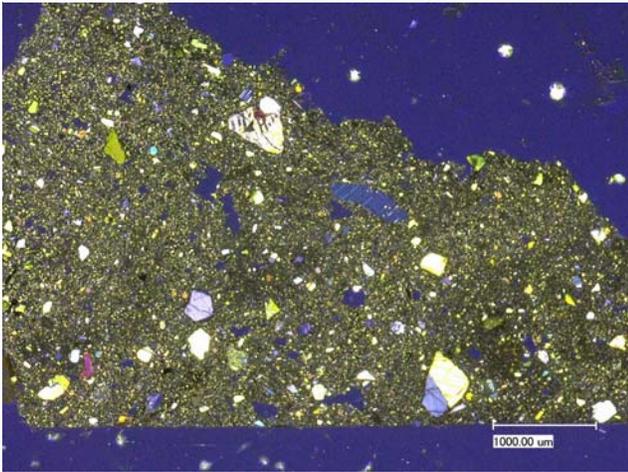

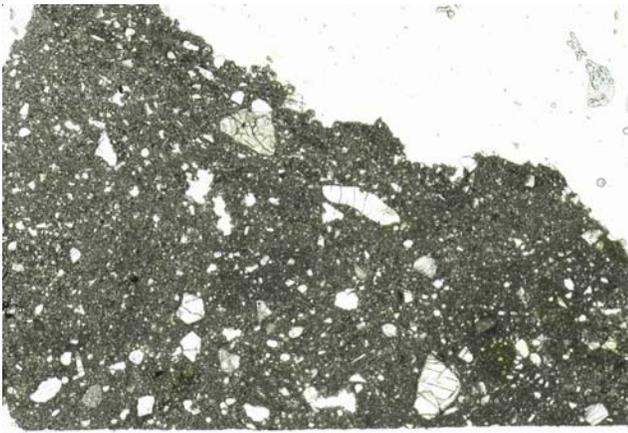

Figure 2: Photographs of thin section 72738,12 by C Meyer @50x.

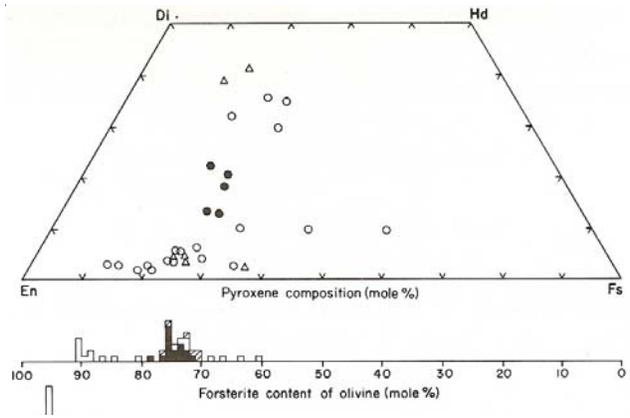

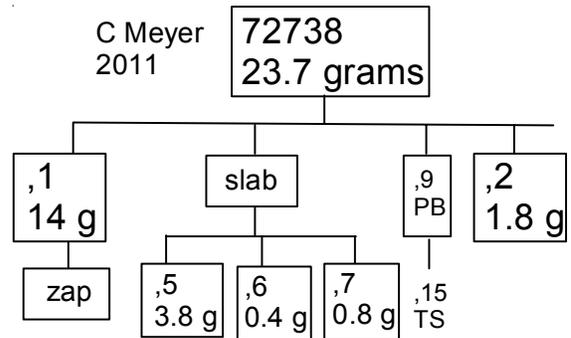

Figure 3: Pyroxene composition in 72738 (Warner et al. 1977).

### Processing

72738 has been sawn (figure 4). There are 4 thin sections

Figure 4: Photo of 72738 after cutting slab. S74-20182. Cube is 1 cm.
