NWA3171
Enriched Basaltic Shergottite
506 grams

**Introduction**
NWA 3171 is a 506 gram stone, partially broken, partially covered with fresh fusion crust (figure 1). It was purchased in 2004 by A.A. Aaronson for D.A. Gregory and is apparently from western Algeria. It is a basaltic rock very similar to Shergotty and Zagami. It has unusual oxygen isotopic composition.

Thin veins of black glass leading to shock melt pockets can be seen in photos of the sawn surface (figure 2).

**Petrography**
This Martian basalt consists of approximately equal amounts of pyroxene and plagioclase (figure 3). Accessory phases include ulvospinel, ilmenite, chlorapatite, merrillite, pyrrhotite, Na-K-Al-Si glass, silica, and rare baddeleyite. Rare calcite, barite and minor rust staining are present in this desert find (Irving *et al.* 2004).

Additional petrographic detail and figures can be found at [http://www2.jpl.nasa.gov/snc/nwa3171.html](http://www2.jpl.nasa.gov/snc/nwa3171.html).

**Mineralogy**

*Pyroxene:* The composition of pyroxene in NWA3171 is given in figure 4 (Irving *et al.* 2004).

*Plagioclase:* The plagioclase is shocked to maskelynite (An$_{41-54}$).

**Chemistry**
None reported.

**Radiogenic age dating**
Park and Bogard (2007) reported a $^{40}$Ar/$^{39}$Ar plateau age of 225 ± 4 m.y., but found that the sample had excess $^{40}$Ar inherited from the magma. There is also a component from the Martian atmosphere. Herd and Peterson (2007) attempted to date tiny baddeleyite grains.

Nishiizumi and Caffee (2004) reported that the $^{10}$Be exposure age was 2.5 – 3.1 m.y.
Figure 2: Sawn surface of NWA3171 (photo by Greg Hupe).

Figure 3: Thin section photomicrograph showing texture of NWA3171 (photo by Tony Irving and Scott Kuehner). Scale is 1.5 cm across. Note the thin shock veinlet (black glass) and brown alteration stain.
Figure 4: Pyroxene diagram for NWA3171 (data replotted from Irving et al. 2004). Does this remind you of Zagami?

Other Studies
Oxygen isotopes for NWA3171 are delta^{18}O = 4.56 ± 0.1, delta^{17}O = 2.77 ± 0.1 and Delta^{17}O = 0.40 ± 0.06 ‰ (as determined by T. Larson and F. Longstaffe, Univ. Western Ontario) and delta^{18}O = 4.5, delta^{17}O = 2.7 and Delta^{17}O = 0.33 ‰ (as determined by Rumble and Irving 2009).
