

65587

65587 FRAGMENTAL POLYMICT BRECCIA 2.14 g
(REGOLITH BRECCIA?), GLASS-COATED

INTRODUCTION: 65587 is an irregular mixture of friable breccia and coherent, vesicular glass collected as a rake sample (Fig. 1). The glass appears to coat a soil clod and soil fills many vesicles in the glass. On fresh surfaces the soil is yellow green with streaks of white.
