

65737

65737 FRAGMENTAL POLYMICT BRECCIA

0.85 g

INTRODUCTION: 65737 is a light gray, friable breccia collected as a rake sample (Fig. 1). Gray, crystalline clasts (up to 3 mm) and white, anorthositic clasts (up to 3 mm) are abundant. It is subrounded with a few zap pits.
