

67659

67659    CRYSTALLINE OR FRAGMENTAL (?) POLYMICT BRECCIA    1.62 g

INTRODUCTION: 67659 is a white to pale gray, fairly coherent, polymict breccia, containing some small gray clasts (Fig. 1). The matrix is fine-grained. It is a rake sample collected 30 m east of the White Breccia boulders and lacks zap pits.
