

78525

Agglutinate

5.11 g, 2.6 x 2.1 x 1.7cm

INTRODUCTION

Sample 78525 was collected as part of the large rake sample at Station 8 (Keil et al., 1974).

PETROGRAPHY

This relatively large agglutinate consists of about half fragments of dark matrix microbreccia welded in a vesicular black glass (Butler, 1973).

Sample 78525 has not been studied.
