

78565**Dark Matrix Soil Breccia**
3.50 g, 1.9 x 1.5 x 1.0 cm**INTRODUCTION**

Sample 78565 is a very friable soil breccia that was collected as part of a large rake sample at Station 8 (Fig. 1).

PETROGRAPHY

Butler (1973) described 78565 as friable, dark grey, matrix-rich breccia with clasts generally of millimeter size composing less than 5%. Small clasts are generally white plagioclase,

mare basalt, black aphanite, and orange glass.

This sample has not been studied. It appears to be similar to 78555 (Keil et al., 1974).
