

**12062**  
Ilmenite Basalt  
738.7 grams

*Figure 1: Photo of lunar sample 12062,0 showing large zap pit with black glass lining. Scale is in cm. NASA #S69-61661.*

**Introduction**

12062 is an subophitic ilmenite basalt with high percentage of pyroxene and medium grain size (figure 2). It has not been dated.

**Petrography**

Neal et al. (1994) analyzed 12062 and studied a covered thin section, but couldn't determine mineral contents. From the mineral mode and the chemical composition, they determined that 12062 is an ilmenite basalt with ophitic to sub-ophitic texture with grain size about 1 mm.

---

**Mineralogical Mode for 12062**

	Neal et al. 1994
Olivine	--
Pyroxene	57
Plagioclase	32.2
Ilmenite	0.3
Chromite +Usp	5.2
mesostasis	3.5
“silica”	1.4

Figure 2: Photomicrograph of thin section 12062,9. Scale about 3 cm. NASA #S70-30255.

### **Chemistry**

The chemical composition of 12062 was determined by Neal et al. (1994) who obtained values for K and Th similar to the whole rock values determined by Rancitelli et al. (1971).

### **Radiogenic age dating**

12062 has not been dated.

### **Cosmogenic isotopes and exposure ages**

Rancitelli et al. (1971) determined the cosmic ray induced activity of  $^{22}\text{Na}$  (33 dpm/kg),  $^{26}\text{Al}$  (76 dpm/kg) and  $^{54}\text{Mn}$  (33 dpm/kg).

### **Other Studies**

Bogard et al. (1971) reported the content and isotopic composition of rare gases in 12062.

There are 7 thin sections.

### **List of Photo #s for 12062**

S69-61600 – 61662	
S69-60860 – 60883	mug
S70-49524	TS
S70-49843 – 49846	TS
S70-49528 – 49533	TS

Figure 3: Photomicrographs of thin section 12062,11 (plane-polarized, crossed-nicols). Field of view is 2.6 mm.

Figure 4: Rare-earth-element composition of 12062 (from Neal et al. 1994).

Figure 5: Composition of 12062 compared with that of other lunar basalts.
